

# CS-21003: Automata Theory and Formal Languages(AT&FL) School of Computer Engineering,

## KIIT Deemed to be University, Bhubaneswar

Session: Jul-Dec, 2024

# Credit: 4

#### **Instructor:**

Mr. Nayan Kumar Subhashis Behera Email: nayan.beherafcs@kiit.ac.in

Phone: +91-7978943719

#### **Class Timings:**

| CSE-39 | 9-10 | 10-11 | 11-12        | 12-1 | 1-2          | 2-3 | 3-4          |
|--------|------|-------|--------------|------|--------------|-----|--------------|
| MON    |      |       |              |      | C-LH-408,2nd |     |              |
| TUE    |      |       |              |      |              |     | C-LH-305,2nd |
| FRI    |      |       | C-LH-002,2nd |      |              |     |              |
| SAT    |      |       |              |      |              |     | C-LH-203,2nd |

#### **Course Objective:**

- To introduce the concepts of string, languages and automata.
- To enable the students to understand Language Acceptors and Generators for different Formal Languages.
- To classify machines by their power to recognize languages.
- To prove or disprove theorems in automata theory using closure and decision properties.
- To identify different formal language classes and their relationships.

#### **Course Outcome:** At the end of the course, the students will be able to:

| CO1: | Develop and implement mathematical models for regular languages with finite automata for real life applications. |
|------|--|
| CO2: | Design regular expressions for acceptance of regular languages.  |
| CO3: | Prove irregularity of languages using Pumping Lemma  |
| CO4: | Design pushdown automata (PDA) for context free languages and demonstrate their properties.                      |
| CO5: | Design grammars of languages and identify the limitations of automata and language classes                       |
| CO6: | Develop computational models using Turing machine  |

# Day Wise Lesson Plan:

| Topics   | Lecture<br>Serial No |  |  |  |
|--|----------------------|--|--|--|
| MODULE 1:  |                      |  |  |  |
| Preliminaries: Set, Symbol, Alphabet, String, Functions and Relations on Strings, Language, Formal Languages             | 1.                   |  |  |  |
| Introduction to Automata, Classification of Automata and languages, Overview of Syllabus                                 | 2.                   |  |  |  |
| Description and definition of Deterministic Finite<br>Automata(DFA)  | 3.                   |  |  |  |
| DFA with examples (Lect-1)   | 4.                   |  |  |  |
| DFA with examples (Lect-2)   | 5.                   |  |  |  |
| DFA with examples lec-3  | 6.                   |  |  |  |
| DFA with examples lec-4  | 7.                   |  |  |  |
| Design of Compound DFAs  | 8.                   |  |  |  |
| Description and definition of Non-Deterministic Finite<br>Automata(NFA) , DFA vs. NFA<br>Design of NFA Examples (Lect-1) | 9.                   |  |  |  |
| Design of NFA Examples (Lect-2),<br>Language accepted by DFA, NFA(without λ-transitions)                                 | 10.                  |  |  |  |
| Languages accepted by NFAs (with λ-transitions)  | 11.                  |  |  |  |
| Conversion from NFA without λ-transitions to DFA   | 12.                  |  |  |  |
| Conversion from NFA with $\lambda$ -transitions i.e. $\lambda$ - NFA to DFA  | 13.                  |  |  |  |
| Minimization of DFA  | 14.                  |  |  |  |
| MODULE 2   |                      |  |  |  |
| Description of Regular Expression (RE), Identities of RE   | 15.                  |  |  |  |
| Write Regular Expression from Regular Languages-(Lect-1)   | 16                   |  |  |  |
| Write Regular Expression from Regular Languages-(Lect-2)   | 17                   |  |  |  |
| Conversion from Regular expression to NFA  | 18.                  |  |  |  |
| Conversion from DFA to RE using State Elimination Method   | 19.                  |  |  |  |
| Closure properties of Regular language (Lect-1)  | 20.                  |  |  |  |
| Closure properties of Regular language (Lect-2)  | 21.                  |  |  |  |
| Pumping lemma for Regular Language (Lect-1)  | 22.                  |  |  |  |
| Proof a language is regular or not by Pumping Lemma (Lect-1)   | 23                   |  |  |  |
| Proof a language is regular or not by Pumping Lemma (Lect-2)   | 24.                  |  |  |  |
|  |                      |  |  |  |

| MID SEMESTER  |     |  |  |  |
|---|-----|--|--|--|
| MODULE-3  |     |  |  |  |
| Description of Regular grammar with examples (Lect-1)   | 25. |  |  |  |
| Regular grammar with examples (Lect-2)  | 26. |  |  |  |
| Conversion between Right Linear Grammar(RLG), Left Linear Grammar(LLG) and FA   | 27. |  |  |  |
| Context Free Grammar(CFG) and Context Free<br>Languages(CFL)  | 28. |  |  |  |
| Find Leftmost Derivation(LMD), Rightmost Derivation(RMD), Derivation Tree of String from a given Grammar                                | 29. |  |  |  |
| Ambiguous Grammar and Check whether the grammar is ambiguous or not. Inherently Ambiguous Grammar and Example                           | 30. |  |  |  |
| Conversion from Ambiguous to Unambiguous Grammar  | 31. |  |  |  |
| Conversion from Context free languages (CFL) to Context free Grammar(CFG) and Find Languages generated by CFG                           | 32. |  |  |  |
| Simplification of CFG i.e. Simplified Grammar  a) Removal of λ- production  b) Removal of Unit production  c) Removal of Useless symbol | 33. |  |  |  |
| More examples of Simplification of CFG  | 34. |  |  |  |
| Description of Chomsky Normal Form(CNF) Conversion from CFG to CNF examples   | 35. |  |  |  |
| Description of Greibach Normal Form(GNF) Conversion from CFG to GNF examples  | 36. |  |  |  |
| MODULE-4  |     |  |  |  |
| Introduction to PDA   | 37. |  |  |  |
| PDA Example (Lect-1)  | 38. |  |  |  |
| PDA Example (Lect-2)  | 39. |  |  |  |
| Instantaneous Description (ID) of PDA   | 40. |  |  |  |
| Conversion from CFG to PDA  | 41. |  |  |  |
| Pumping lemma theorem for CFL   | 42. |  |  |  |
| Closure Properties of CFL (Lect-1)  | 43. |  |  |  |
| Closure Properties of CFL (Lect-2)  | 44. |  |  |  |

| MODULE-5  |     |  |  |  |
|---|-----|--|--|--|
| Introduction to Turing Machine(TM)  | 45. |  |  |  |
| Turing Machine Examples   | 46. |  |  |  |
| Instantaneous Description(ID) of TM   | 47. |  |  |  |
| Recursive Languages(REC) vs. Recursively Enumerable Languages(REL) Chomsky classification of Grammar & Languages. | 48. |  |  |  |
| END SEMESTER  |     |  |  |  |

### Text books:

1. Introduction to automata theory, languages and computations, John E.Hopcroft, Jeffery D.Ullman and Rajeev Motwani, Pearson Education, 3<sup>rd</sup> Edition. (PDF)

#### Reference Books:

- 1. An Introduction to Formal Language and Automata, Peter Linz, Jones & Bartlett Publishers, 6<sup>th</sup> Edition. (PDF)
- 2. Elements of the theory of computation, Lewis, Harry R. and Christos H. Papadimitriou Prentice- Hall Englewood, 2<sup>nd</sup> Edition. (PDF)
- 3. Introduction to the Theory of Computation, Michel Sipser, Thomson Brooks/Cole, 2<sup>nd</sup> Edition. (PDF)
- 4. Theory of computer science by KLP Mishra & N. Chandra Sekharan ,PHI, 3rd edition. (PDF)

- 4. https://www.ics.uci.edu/~goodrich/teach/cs162/notes/:by Prof.M.T.Goodrich, University of California, Irvine, USA

#### **Grading Policy:**

• Assignments/quizzes/activities: 30 Marks

• Mid-semester exam: 20 Marks

• End-semester exam: **50 Marks**
